## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see pages 4 - 7, filed March 12, 2009, with respect to claims 1 - 11 have been fully considered and are persuasive. The rejection of claims 1 - 11 has been withdrawn as claim 1 is in condition for allowance, claims 4 and 7 - 9 depend from claim 1, and claims 2, 3, 5, 6, 10, and 11 have been cancelled.

### ***Allowable Subject Matter***

2. Claims 1, 4, and 7 - 9 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The examiner did not find any prior that taught or suggested a method of forming a filter unit comprised of a filter element and an encircling peripheral encasement frame to which the filter element is sealed, comprising the steps of: providing a pleated filter element having front and rear faces and a bounding peripheral edge, locating around the peripheral edge of the element a mould unit which seals against peripheral regions of the front and rear faces and which together with the peripheral edge and marginal regions of the front and rear faces of the filter element defines a mould cavity, said mould unit having tapering projections that bite into said peripheral regions of the front and rear faces so as to cause a depression therein, filling the mould cavity with a solidifiable, liquid resin composition, effecting conversion of the liquid to a solid, and removing the mould thereby producing the filter element.

US Patent No. 6,045,600 to Michaelis and French Patent Specification No. 2 140 536 (hereinafter the Norit reference) represent the closest prior art. The examiner generally agrees with Applicant's arguments that there is no motivation for one of ordinary skill in the art to combine these references to come up with the method of claim 1 of the instant application. The Norit reference discloses a method of forming a frame around a filter made of a porous plate (1). As disclosed in page 3 lines 27 - 33 of the translation of the Norit reference, the frame is formed by a molding (12, 13) with blades (19) that penetrate the porous plate (1). These blades inherently form a depression in the porous plate. One of ordinary skill in the art, however, would not reasonably use such a molding with a pleated filter media. Pleated filter media is generally formed of a relatively thin sheet and using blades would likely weaken the sheet or cut a hole through the sheet. Thus, although the blades of the Norit reference can be considered tapering projecting that bite into the filter media to cause depressions, these blades are disclosed to penetrate the media, which would reasonably be expected to be disadvantageous for a pleated media because they could create holes in the media inside the frame where particulates could pass through unfiltered.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

**Conclusion**

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Other prior art references listed on the PTO-892 (Notice of References Cited) are considered to be of interest disclosing similar methods for forming filter units.
